

ASHIQ K S

FULL STACK DEVELOPER · JAVA + ANGULAR

Thrissur, Kerala, India (open to relocation across India) | +91 90615 32283 | ashiqs462@gmail.com | [LinkedIn](#)

PROFESSIONAL SUMMARY

Full Stack Developer with 3+ years building and supporting enterprise web applications for Jyothy Laboratories Pvt. Ltd. (FMCG) — 21 applications serving 2,000+ users — in Java, Spring Boot, Grails (Groovy), Angular, TypeScript, and MySQL. Sole engineer on a full production server migration. Strong record resolving critical production incidents, refactoring large legacy systems, and shipping configurable approval workflows and SAP integrations.

TECHNICAL SKILLS

Frontend: Angular, TypeScript, JavaScript, RxJS, Angular CLI, HTML5, CSS3, jQuery, Thymeleaf, Responsive UI

Backend: Java, Spring Boot, Spring MVC, Grails (Groovy), REST APIs, Hibernate/JPA/GORM, JDBC, MVC Architecture

Data & Integration: MySQL, JSON, SAP Integration (FTP/CSV), Apache POI, JasperReports, JWT Authentication, RBAC

Servers & Practices: Windows Server, Apache Tomcat, Server Migration & Deployment, Git, Agile/Scrum, Root-Cause Debugging,

Performance Optimization, Production Support

PROFESSIONAL EXPERIENCE

Full Stack Developer — MMM Infosolutions Pvt. Ltd., Chalakudy, Thrissur

July 2023 – Present

Client: Jyothy Laboratories Pvt. Ltd. (FMCG)

- Migrated 21 production applications to a new Windows Server environment as the sole engineer — server provisioning, Apache Tomcat and runtime setup, code-level changes, scheduler reconfiguration, file-path migration, and database cutover — validating every deployment within a 2-week window.
- Ship continuous enhancements across 3 live enterprise portals still in active development — delivering new modules and feature iterations through successive release phases while concurrently providing production support, incident resolution via root-cause analysis, and functional regression validation across the full application estate.
- Mentor and onboard junior developers through codebase, architecture, and review cycles, and author technical documentation for modules and workflows.

KEY PROJECTS

Vendor Purchase Request (VPR) Portal — procurement platform handling ~10,000 purchase requests annually (PR → RFQ → Approval → PO) · Angular, TypeScript, Grails (Groovy), MySQL, REST APIs

- Refactored a 12,000+ line monolithic REST controller into 3 domain-specific services (dashboard, RFQ, core API) spanning 130+ live endpoints, with zero downtime and no frontend contract changes.
- Built SAP integration automating Purchase Order push via FTP-based CSV delivery with business-rule-driven field mapping, eliminating manual PO entry across ~10,000 purchase requests per year.
- Designed and shipped a configurable approval-routing engine with plant-based and dynamic budget-threshold logic embedded in the existing workflow state machine, replacing hard-coded routing rules.
- Built the Angular UI for PR creation, RFQ management, and multi-stage approval workflows, integrated with JWT-secured REST APIs and role-based access control.
- Diagnosed and fixed a production routing defect letting purchase requests silently bypass a mandatory approval stage, closing a compliance gap.

Vendor Management (VDM) Portal — vendor sourcing platform (RFQ → Vendor Submission → L0–L3 Approval → SAP Push) · Spring Boot, Hibernate/JPA, MySQL, Thymeleaf/jQuery, Apache POI

- Resolved a production incident causing connection-pool exhaustion and HTTP 500 crashes several times daily — traced leaked Hibernate sessions and file streams across 15+ methods in 8 services, hardened the pool with dead-connection eviction and abandoned-connection reclaim, and added timeouts to outbound SMTP/REST/LDAP calls to prevent thread-pool starvation.
- Rebuilt the nightly RFQ auto-approval scheduler's exact-date query as a self-healing “on or before” check, eliminating permanent approval loss from delayed or failed scheduler runs.
- Built a reusable streaming Excel export component (Apache POI SXSSF) replacing a legacy writer capped at 65,536 rows, migrating 6 report endpoints and enabling single-file exports of 100,000+ rows across 75 columns.
- Extended the L0–L3 approval workflow with owner/L1 mapping rules and repository access scoping, and built delegate access via mutual co-user mapping with a full audit trail.

TaskMan — Marketing Operations Portal — task, project, and meeting follow-up tracking across teams · Grails (Groovy), GORM/Hibernate, MySQL, jQuery, JasperReports

- Built a structured Minutes-of-Meeting and follow-up module converting free-form notes into discrete action points with owner, due date, and status, governed by per-project MOM numbering, a 2-day edit window, and change-history logging.

EDUCATION

Diploma in Computer Engineering — Govt. Polytechnic College, Chelakkara, Thrissur

2020 – 2023
